** Products are not sterile. These product codes would need to be sterilised before clinical use.

STERILE DRY SWABS

Sterile Dry Swabs are intended for the collection of specimens for culture. Upon collection of specimens, the swab must be placed immediately in a suitable transport or culture system.

If used with any other proprietary kits or test systems, reference must be made to the kit or test manufacturer to ensure that the swab is compatible, and appropriate controls included in the test protocol.
