

Odormycin™

**Summer freshness
for autoclaves**

Odormycin™

The world's leading autoclave deodorant
Even autoclaves are worth it!

- Neutralise and eliminate offensive odours
- Choice of lemon or apple fragrance
- Easy to use – just place one capsule in each load
- Safe to use- non-toxic

Odormycin™ deals effectively and safely with those feared microbiology lab smells which result from autoclaving organic waste material. The odour-causing molecules are neutralised rather than masked, leaving a fragrance which is pleasant, but not overbearing.

The highly concentrated liquid deodorant is supplied in convenient gelatin capsules which are activated by the heat and moisture within the autoclave cycle, allowing the fragrance to be released.

Simply place a single capsule of Odormycin™ with each load to eliminate those offensive odours, leaving the laboratory smelling fresh, clean, and pleasant.
Available in fresh lemon or apple fragrances.
